**Abstract** *Zeuxine flava* (Wall. ex Lindl.) Benth. ex Hook. f., a newly recorded species of Orchidaceae from China, is reported. This species is characterized by having flowers saffron, lip “T”-shaped, lobules of epichile squarish and not much longer than wide, and each side of sac with only one callus inside.

**Key words** *Zeuxine*, *Zeuxine flava*, Orchidaceae, new record, China.

During conducting the program on “Biodiversity, Status, Trade and Conservation of Native Orchid Species in Limestone Region of Yunnan, Guizhou and Guangxi”, which is financially supported by Kadoorie Farm and Botanic Garden, a species of the genus *Zeuxine* Lindl. is found as new record to the Chinese orchid flora and here reported.

***Zeuxine flava*** (Wall. ex Lindl.) Benth. ex Hook. f. in Fl. Brit. Ind. 6: 108. 1890; Seidenfaden in Dansk Bot. Ark. 32 (2): 78, fig. 52. 1978. ——*Monochilus flavum* Wall. ex Lindl., Gen. Sp. Orch. 487. 1840.

黄花线柱兰 新拟

Terrestrial. Plants about 20-30 cm tall. Leaves 3-4, broadly lanceolate, 5-6 cm long, 1.5-2 cm wide. Inflorescence 13 cm long, 8-15-flowered, hairy. Bracts 5-6, lanceolate, caudate, hairy, 5 mm long. Ovary with pedicel 12 mm long, not hairy. Flowers small, saffron, not fully open; sepals not hairy, middle sepals concave into boat-shaped, 3.5 mm long, 2 mm wide; lateral sepals oblique, falcate, 3-veined, 3 mm long, 1.2 mm wide; petals oblong, truncate, 2.5 mm long, 1 mm wide. Lip “T”-shaped, 3 mm long, 4.5 mm wide, saccate at base, with 2 hooked calli inside. Column 2 mm long.

**China. Yunnan** (云南): Wenshan (文山), terrestrial in the sparse forest in limestone areas, alt. 1400 m, 2002-05-02, HK Kadoorie PT (香港嘉道理项目队) 3402 (PE).

*Zeuxine flava* is distributed in Sri Lanka, Nepal, India and Thailand. The specimen from Yunnan represents the first record of this species in China.

中国兰科线柱兰属一新记录种——黄花线柱兰
