

BULLETIN OF BIOLOGY (Monthly)

2010 May No.5

CONTENTS (main topics)

- The mechanism of enzymatic catalytic degradation of organophosphorus pesticides in microbe ... Liu Jianli(1)
The disulfide bond and protein structure Xu Guoheng(5)
Genetic engineering and genetic improvement of plants Wu Fubiao(7)
The status of Mangrove resources and sustainable development strategies in beibu gulf of Guangxi.....
..... Xu Shuqing Li Jiaming Lu Shibiao et al.(11)
Stem cell Liu Yanxia Ding Mingxiao(18)
How to deal with the unexpected answers of students in the class An Jun(26)
A teaching method of biology concept with examples Wang Dongmei(31)
Teaching high school biology—"nucleic acid is the genetic material of the evidence" ... Zhang Song(35)
Analysis of genetic ethics problems contained in high school biology textbook.....
..... Cheng Yanping Zhang Yan(43)
An abnormal meiosis of pollen mother cells observes in the Oriental hybrids lily "Siberia".....
..... Zhang Caixia Ming Jun Liu Chun et al.(45)
A simulation experiment about using DNA conmparison method to recognize evidences of biological evolution
by means of GenBank Hao Yingxia Wang Zhongli Lian Yingyu et al.(48)
A revelation from the Vitamin discovery Li Keyou Zhu Hailan(60)

金 钱 松

金钱松 [*Pseudolarix amabilis*(J.Nelson)Rehder] 国家二级重点保护植物,又名金松,松科落叶高大乔木。树干通直,树冠圆锥形。树皮深灰色或灰褐色,鳞状片。枝条不规则轮生而平展,小枝有长短之分。叶片条形,扁平柔软,在长枝上成螺旋状散生,在短枝上15~30枚簇生,向四周辐射平展,秋后变金黄色,圆如铜钱,因此而得名。金钱松的花雌雄同株,雄花球数个簇生于短枝顶端,雌花球单个生于短枝顶端。种鳞会自动脱落,种子有翅,能随风传播。

金钱松分布于江苏宜兴、浙江、安徽南部、福建北部、江西、湖南、湖北和川至四川万县交界地区。生境多为海拔100~1 500 m地带的针叶或阔叶林中,喜温暖、多雨、土层深厚、肥沃、排水良好的酸性土环境。

金钱松树姿优美,秋后叶呈金黄色,颇为美观,也是极具开发价值的庭园绿化树种。
