

云南檀香科一新种

SPECIES NOVA SANTALACEARUM E PROV. YUNNAN

Key words *Thesium*; *T. remotebracteatum*

关键词 百蕊草属; 疏苞百蕊草

疏苞百蕊草 新种 图 1

Thesium remotebracteatum C. Y.

Wu et D. D. Tao, sp. nov.; in C. Y. Wu, Fl. Yunnan. 4: 298. 1986, nom. seminud.

Species nova bracteis remotis, bracteolis 2 prope basin florum insertis, pedicellis usque ad 2.5—4 cm longis semper reflexis, facile distinguenda.

Rhizoma gracile, erectum. Caules pauci vel subnumerosi, graciles, longitudinaliter sulcati et striati, glabri. Folia laxe disposita, linearia, acuta, 1.5—2 cm longa, 2 m mlata, glabra, costa utrinque prominente, sessilia. Flores singulares axillares, albi, ovoidei, 4—5 mm longi, c. 2 mm lati; bractee lanceolatae acutae, 2.5—4 cm longae, remotae; pedicelli graciles, 2.5—4 cm longi; bracteolae bracteis c. 2—4-plo breviores, lineares, acutae, margine leves vel papilloasae. Perianthium 3—4 mm longum, lobis 5 triangulari-lanceolatis. Stamina 5, 2.5 mm longa, ad loborum bases disposita, filamentis brevibus complanatis, antheris 0.2 mm longis in perianthii tubo inclusis. Stylus 1.5 mm longus, antheras superans. Fructus immaturi.

Yunnan: Deqin, in ravine, alt. 2800 m. 20. June. 1937, T. T. Yü 8444 (Holotype, KUN)
